7. If new DO Photo by you, then add to Buffer ([here](#))
8. If new Feedly source, then add to Buffer ([here](#))
9. If any new post in Buffer, then add to Google Calendar ([here](#))
10. If new Instagram post by a specific user, then add to Buffer ([here](#))

“One issue that some people may have with the recipe that posts your Instagram photos to Twitter is that it does so for every picture. An alternative is to create a Tumblr account just for Instagram pictures that you want to share on Twitter. Then, connect that Tumblr account in the Instagram app.

Finally, use the IFTTT recipe that automatically posts any pictures you share on your Tumblr page to Twitter. Now when you're sharing a photo on Instagram, if you also want to share it on Twitter, just select the Tumblr sharing icon, and it will show up as a tweet with a picture preview.”
